

Matford Treco

Installer Profile:

Matford Arable Systems is a Devon based agricultural supplies company that has been servicing the agricultural requirements of farmers in Devon and Cornwall for the last 15 years. We recently set up a division of the company called Matford TRECO. We are supplied through the national distributor TRECO to distribute fully automated Tatano pellet/grain boilers and Olivieri pellet stoves into the Agricultural, Commercial and Domestic markets.

The Tatano ranges of boilers are capable of burning wood pellets and cereals, some models have an agitator hopper allowing wood pieces, dust, shavings and pellets to be burnt. There is also one model capable of burning wood chip. The machines are mostly designed to heat water, however there is a range of air blowers that are suitable for heating greenhouses, warehouses etc.

We are also able to supply a TRECO pod. This is a self contained unit for the burners with an extended hopper and an opening roof structure allowing filling of the machine with a fore end loader. All machines are CLEAR SKIES approved and TRECO has a team of approved installers.

Recent installations have been carried out on farmhouses, holiday lets, country houses, greenhouses and offices. As an agronomy based company we can easily access grain from our existing farming clients, that can then be distributed by our fleet of delivery vans and lorries to anywhere across Devon and Cornwall. Both grain and wood pellets can be supplied bulk, or in one ton, half ton or 25kg bags.

Services / products on offer:

Suppliers and installers of Biomass boilers and Pellet stoves for Agricultural, Commercial and Domestic markets. Also suppliers of wood pellets, grain as fuel and very competitive Poliedra Flue.

LCBP accreditation reference no. 2142740
