Installer Profile:

Solar PV (Photo Voltaic) energy produces energy from daylight. It's sustainable, non-polluting, has no moving parts and comes with a guarantee of 25 years!

PLUG INTO THE SUN are the only accredited solar PV installation Company in Cornwall. We undertake the full process - from design through installation and commissioning to on-going maintenance. We have installed systems on all roof types and have a range of products for roof integrated and above roof to suit any requirements. We also install off-grid solutions using battery banks. Grants of up to 50% are available for solar PV installations on a first come first served basis from the Low Carbon Building Programme. We've undertaken many installations for a diverse range of people and organisation, but all have had one thing in common - a wish to reduce their Carbon emissions and make the world a better place. It also saves money which is an added bonus!

Along with a growing number of householders, we've installed systems for Cornwall County Council, Penwith District Council, Kerrier District Council and Penwith Housing Association. One of our first installations was at the Carnyorth Outdoor Education Centre near St Just where we installed 5kW of solar slates. The Centre has just been awarded the Best Community Scheme by the prestigious South West Energy Award. If you require more information or a no obligation free advice and quote please get in contact.

Services / products on offer:

Expert advice, design, installation, commissioning and maintenance for solar photovoltaic (PV) installations for homes, business, charities and Local Authorities. We offer FREE advice and quotes on all aspects of solar installations.
