

Wood Energy Ltd

Installer Profile:

Wood Energy Ltd has recently installed industrial size boilers at the National Assembly for Wales; the Bath and West Showground; a boiler at the Eden Project and a 1.6MW steam boiler in Northern Ireland. It has completed many domestic size pellet stove installations for clients including the National Trust and Forestry Commission.

1 If you want a beautiful unit heating your room only, with an open fire to look at, you want to have a look at our Extraflame pellet stoves (spaceheaters). If you want an open fire, but also central heating and domestic hot water from the same unit, you want to look at our Extraflame pellet stoves with backboiler. The well-established Italian company Extraflame supplies our range of small and medium-sized pellet stoves and stoves with backboilers. A glass fronted door allows the viewing of the flame, an air wash system helps keeping the glass clean. All Extraflame devices have integral controllers with a room thermostat, time clock and electrically operated ignition. Further, they have integral fuel hoppers which are filled with bagged pellets. Adjustable feet allow for moderately uneven floors. Spacious ash-boxes make them easy to clean.

If you do not want an open fire or a unit providing space heat, but a system to provide central heating and domestic hot water, you want to have a look at our Firefox Boiler PK-Series. This sophisticated boiler range is exclusively available from Wood Energy Ltd and is produced by the Austrian company Binder. Total reliability and user friendly operations make this the perfect boiler choice for domestic and small commercial applications.

The Binder boiler systems are designed to be installed in a utility room and offer the same convenience you would experience with an ordinary gas or oil boiler. The large 400l pellet hopper allows a long functioning autonomy.

Please get in touch with us for a more detailed brochure about our products and services.

Services / products on offer:

Wood Energy Ltd is the leading national supplier of fully automatic biomass heating systems. Wood Energy Ltd supplies pellet stoves and boilers from two companies adopting different styles of machine. Our products offer the opportunity to use sustainable wood fuel with the convenience of fossil fuel systems.

- [Binder](#) boilers from Austria - some of the highest quality biomass boiler technology available today. Domestic Binder wood-pellet boilers range from 10kW to 45MW.
- [ExtraFlame](#) automatic pellet stoves and boilers from Italy for smaller heat loads in the range 3kW to 23kW.

LCBP accreditation reference no. 2121298
