

# Natural Generation

## Installer Profile:

Natural Generation is a Cornish-based company, providing renewable energy solutions to domestic, commercial, community and public sector clients. We endeavour to offer high quality products that have been manufactured as closely to home as possible and always support local businesses and trades people. We pride ourselves on our service and support so limit our catchment to the south west to enable us to fulfil this promise. This also reinforces our environmental policy to reduce our own carbon footprint.

We are fully accredited installers of wind turbines, solar hot water systems and photovoltaic systems after identifying these as the most sustainable and financially viable technologies for the south west, where we are lucky to benefit from high wind and solar resources.

Accreditation gives our clients peace of mind that we work within an audited quality control system and also allows us to sign off systems eligible for LCBP grant funding.

We passionately believe that by taking responsibility for our environment now we are taking responsibility for our future.

## Services / products on offer:

- Wind turbines – both grid tied and off-grid systems
- Solar thermal systems
- Photovoltaic systems
- Heat pump systems
- Hybrid systems (e.g. wind/pv or wind/heat pump)
- Individual energy efficiency and renewable energy project advice
- System design, technical consultancy and planning advice
- Project management of integrated systems

LCBP accreditation reference no. MCS:1029
