

Segen

Small Wind

Segen sells and installs the Iskra 5kW, Skystream 1.9kW, Kestrel 1kW and Westwind 10kW & 20kW small wind turbines which are among the most efficient and cost effective small wind turbines in their class currently available on the UK market. Segen can also offer a Vestas 75kW turbine for industrial scale applications.

Solar PV

Segen's experience as a developer of large scale solar photovoltaic plants in Spain, we now offer cost competitive commercial, domestic and not for profit solar energy systems in the UK. We are able to bring to the UK market an unrivalled level of experience and price to offer complete turnkey PV systems for on or off-grid applications

Micro Hydro

Micro hydropower was the mainstay of power generation for hundreds of years before fossil fuels were harnessed at the start of the industrial revolution.

Segen offers a range of services and water turbines for the design and implementation of micro-hydro projects across the UK, from feasibility studies, environmental impact assessments, abstraction licenses, system design and implementation.

Combined Heat and Power

Segen has recently added a range of a Biodiesel CHP system for schools, hospitals, housing associations and other users of both electricity and heat. CHP is the co-generation of heat and electricity, in which the "spare" heat produced, is used for hot water or building heating.

LCBP accreditation reference no.

2139726 & 2118114
