

Installer Profile

Source Energy is a Cornish Based company, specialising in the Supply and Installation of Ground source and Air Source Heatpumps. Partnered with Danfoss and combining over 10-years system design and installation experience with 30 plus years know-how from our Swedish manufacturers, we have an unrivalled knowledge of this innovative technology in the UK.

Whether you are a self-builder or renovator, a developer, architect or consulting engineer, we can assist you to achieve the most efficient, environmentally friendly and cost effective heating system for your building project. Our systems range from a single 4kW unit to multiple units with a single controller producing around 300kW.

Source Energy provide a complete solution for our clients from technical site survey, system design, installation, commission and on-going customer support. We can provide underfloor heating systems as part of a package to simplify your project, and work closely with mechanical ventilation companies, providing a complete solution.

We can help you to access the government grants available towards the cost of your system. Tax incentives are also available for businesses purchasing our qualifying energy efficient technologies.

Services / products on offer:

Design, installation, and support of ground, air and water source heat pumps.

Supply and installation of underfloor heating systems.
